

Apache inside Docker

Prerequisites:

- In Instance security group add custom TCP port 8080 along with http port 80 and ssh port 22.
- Instance is installed with docker.

Project Structure:

```
|— Dockerfile
|— my-site/
|   |— index.html
```

Commands:

- `sudo apt install docker.io -y`
- `sudo systemctl status docker`
- `sudo usermod -aG docker $USER`
- Build the Dockerfile

Dockerfile:

```
# Use the official Apache image
FROM httpd:2.4

# Copy website files into the Apache document root
COPY ./my-site/ /usr/local/apache2/htdocs/
```

Html code:

```
<!DOCTYPE html>
<html>
<head>
  <title>Hello from Apache in Docker!</title>
</head>
<body>
  <h1>Welcome to my Apache Docker container </h1>
</body>
</html>
```

Commands :

- `docker build -t my-apache-site .`
- `docker run -d -p 8080:80 --name apache-container my-apache-site`
Here we are trying to run this container in 8080 port number. Go check http://<public_ip>:8080.
- `docker stop apache-container`
